

President's greeting.....

With this writing, fall is in the air, daylight is fast fading, there are cool evenings and there is less time outside! More time to carve and work on that idea that keeps running through your mind. Give it a go and let's see what happens. It may be the next fad in carving!!!

Keep your edges keen, cuts clean and always, safety first as you keep making more chips!!

The Pres

New Old Tool

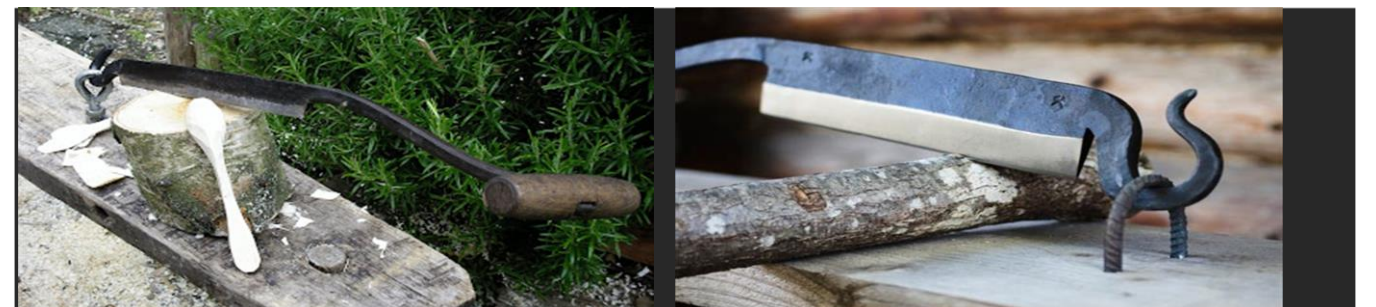

Another tool has been rediscovered, and is adopted especially by green woodworkers. Meet the 'Cloggers Knife' (aka Stock Knife, aka Peg Knife).

The usual configuration of this large, straight bladed, long handled knife enables you to cut with massive shearing action like a guillotine. The hook at the end is engaged in an eye in a workbench, and allows the user to exert great leverage. The knife back and handle were made of wrought iron to give flexible strength, while the blade had a thin sheet of blister steel laminated on top to give a razor sharp edge. Current versions of this tool are made from high carbon steel.

It was frequently used to make tent pegs, but by far the most common use was by cloggers who used several different configurations to carve wood clogs.

The long, strong handle produces unique cuts in green timber - allowing a user to produce a continuous curve over several inches. What makes the device special is the union of power and control the user has, as the blade is always in contact with the work. The blade never chops like a swung axe. Instead, it is pushed through the wood as the user adjusts direction of travel by moving the block of wood.

CWCA at Connecticut Valley School of Woodworking open house!

M. Schulte, 126 Goose Green Rd., Barkhamsted, CT 06063
